

There's no need to limit your robot vacuum to an area with four walls and a door for cleanup. you'll be able to produce your own boundaries within an open floor plan or alternative challenging room layout. Here's how.

Neato-brand bots go with magnetic strips called Boundary Markers. These strips create a physical threshold that your robot vacuum is aware of to not cross. you'll be able to even use scissors to regulate the dimensions of the strips for bigger customization.

Don't want to move your pet's food and water anytime your vacuum cleans? Trim your Boundary Marker to size, and make a fringe around Fido's bowls. It's as easy as that.
